POWER BI STUDENT ANALYTICS REPORT

Student Data Visualization Dashboard

This report presents a five-page-style analysis of the student dashboard shown in the Power BI report. The dashboard uses simple visualizations to summarize department-wise student counts, gender distribution, and category distribution.

Prepared as a Power BI visualization report

1. Dashboard Overview

The Power BI report is designed to give a quick visual understanding of student information. The central report area contains three main visuals: a department-wise column chart, a gender donut chart, and a category pie chart. The right side contains the Filters and Visualizations panes, while the top ribbon contains common Power BI data and report-building tools.

Main dashboard elements

Component	Purpose
Students by Department	Compares the number of students across departments.
Students by Gender	Shows the male and female student proportions.
Students by Category	Shows the distribution across student categories.
Filters Pane	Provides a place to apply report or visual filters.
Visualizations Pane	Provides tools to select and configure visuals.

Dashboard purpose

The main purpose is to make student information easier to understand than a raw table. A user can identify the largest department, compare gender proportions, and understand category composition at a glance. This type of report is useful for academic monitoring and presentation.

2. Department-wise Student Analysis

The column chart compares five departments shown in the dashboard. CSE has the highest displayed count, followed by AI & DS, IT, ECE, and EEE.

Department	Students
CSE	45
AI & DS	38
IT	32
ECE	28
EEE	24

Key observations

• CSE has the highest displayed student count with 45 students.

• AI & DS follows with 38 students, making it the second-highest group in the chart.

• EEE has the lowest displayed count with 24 students among the five departments.

• The chart provides a simple ranking that can help compare department strength.

These values are the values displayed in the supplied dashboard image and are treated as demonstration/report data.

3. Gender and Category Analysis

The dashboard contains two circular visuals that summarize student composition. The gender donut shows a total of 1,248 students, with 723 male students and 525 female students. The category chart shows five displayed categories: General, OBC, SC, ST, and EWS.

Gender	Students	Share
Male	723	57.93%
Female	525	42.07%
Total	1,248	100%

Category distribution displayed

Category	Students
General	723
OBC	276
SC	156
ST	64
EWS	40

4. Conclusion and Power BI Benefits

The supplied Power BI dashboard demonstrates how a small set of student metrics can be transformed into easy-to-read visual information. The department chart supports comparison, while the gender and category charts provide composition-based insights.

Benefits of the report

• Simple visual presentation of student information.

• Quick comparison between departments.

• Clear view of gender composition.

• Easy understanding of category distribution.

• Power BI Filters and Visualizations panes support interactive analysis.

• The report can be extended with attendance, CGPA, semester, age, or individual student tables.

Suggested future additions

For a more complete student analytics dashboard, additional pages could include academic performance, attendance analysis, semester-wise performance, CGPA distribution, and a searchable student details table.
